Project Summary

The primary responsibility of the role was to design and develop dynamic web applications using React JS, focusing on creating interactive user interfaces and enhancing the overall user experience.

Role and Responsibilities

- Utilized version control systems to collaborate effectively with team members, ensuring smooth coordination and version management throughout the project.
- Designed and implemented the client side of a web application using React JS and its libraries, including Hooks, Redux, React Router, Material-UI, and Axios.
- Developed a dynamic web-based project allowing users to create custom pages with logos and forms based on their input.
- Employed best practices in UI/UX design to ensure a user-friendly and visually appealing application interface.
- Actively participated in the development process, learning and applying new technologies and techniques to improve project outcomes.

Skills

React.Js — Librarys :- Hooks , Redux , React Router , Material-UI, Axios

Android Studio — Java language, XML layouts, Android SDK

Google Cloud Platform Services — Compute Engine, BigQuery, Google Cloud Function, and Cloud Storage (Bucket), Vertex AI Workbench

JavaScript — Hoisting , ES6 features, HOF , Error Handling , Array methods

Python

SQL

HTML 5

CSS/SASS

Node

Mongodb

Java
